

Prepare Your New Brush For Painting.

With any new natural bristle hair paint brush **it's perfectly normal to have a few loose bristle hairs.** Follow our five step guide to minimize bristle shedding.

1: SLAP

Slap the bristles against your hand or a hard surface several times to loosen and expose any rogue bristles.

2: PLUCK

Use your finger tips to gently pull and pluck out any loose bristles that you see.

3: KNIFE / SWEEP

Using the back of the knife by pulling the hair towards you in a sweeping motion over the entire brush head.

4: RINSE

Gently rinse your brush in warm water then work the bristles back-and-forth with the tips of your fingers.

5: X-ing

Dip the brush in paint (1/3 the bristle length) and paint back/forth over newspaper print in an "X" pattern.
